

Self-Assessment

In this project, I took the initiative from the beginning by getting us organized and helping the team understand what needed to be done. I introduced our innovation idea and made sure it was something we could realistically build within the assignment requirements. Once we agreed on the concept, I assigned roles so that each person had a clear responsibility and the workload felt balanced. And I was also able to take away the knowledge of Natural Language Processing (NLP) with how it works in a practical setting and how responses are created in platforms like Chatfuel. Understanding how to structure conversation and train a bot is something I can use in future technology or stem-related projects.

Throughout the project, I stayed engaged and made sure we stayed on track. I checked in with my teammates, clarified details when needed, and made sure the parts were working smoothly. I also stayed open to feedback and adjusted based on what the group felt was best for the final project. Taking the leadership role helped me grow more confident in supporting group progress.

Overall, I feel I contributed consistently and kept collaborating positively. I tried to create an environment where we could all work comfortably. If we had more time, I would have liked for us to design user interface for our innovation app.

Peer Assessment

My group members contributed strongly and consistently, and we worked well together. Danny took full responsibility for the slide deck and made sure it was clean, organized, and aligned with our innovation idea. They kept us updated with their work and were open to suggestions, which helped match the message we wanted to deliver.

Gursimranjit played a major role by leading the video pitch and presentation. They were confident, prepared, and made sure the final pitch explained our Smart Parking Finder innovation clearly. They also helped with the structure of the video so that it felt professional and engaging. They were willing to take responsibility for our group presentation effectively.

As a team, we communicated respectfully and stayed understanding each other's schedules, ideas, and work styles. We made decisions together and supported the parts each person was responsible for. Because everyone put in effort and respected the group's goals, the project came together smoothly and felt like a true collaboration.
